RAG-MoE controlled-mechanism evaluation
(a) Controlled ranking under telemetry loss
Mean reciprocal rank
Temporal MLP
Unconditional fusion
Fixed-curvature fusion
RAG-MoE
Complete
Auth only
DNS only
Random 50%
Hub loss 50%
(b) Conditional structural-benefit phase map
β = 0
β = 1
β = 2

ΔMRR, RAG-MoE minus temporal
(c) Learned gate response
Mean structural admission ᾱ
Growth concentration β
(d) Gate utility calibration
Ideal reliability
Observed helpful fraction
Fraction with positive rank gain
Predicted gate admission α
