Source-rank spectra and real-network transfer
(a) Controlled random-loss rank spectrum
(b) Controlled hub-loss rank spectrum
Temporal MLP
Unconditional fusion
Fixed-curvature fusion
RAG-MoE
P(R ≤ r)
Source rank, lower is better
(c) Residual-gain distribution
β = 0
β = 1
β = 2
Density
Episode-level ΔMRR
(d) Real-incident transfer and safety audit
LANL mean reciprocal rank
Complete
Auth only
DNS only
Random 50%
Hub loss 50%
